

COMPOSITE MATERIALS IN AERONAUTICS

Table of contents

I - Executive Summary	5
II - Structure of the composite industry in 2005	7
1 - Overall composite industry structure	7
2 - Overview of the composite for the Aeronautics application	10
a) Industry quantification	10
b) Economics	11
c) Competitive environment	12
3 - Main recent historical trends for the Aeronautics application	15
a) Limited past growth	15
b) Strong rise in resin prices	17
c) Strong growth of carbon fibre volume and price	18
III - Main dynamics and vision of the composite industry in 2012-2015	19
1 - Main dynamics	19
a) Future substitution of competing materials in Aeronautics	19
b) Composite industry will shift towards low cost countries	21
c) Consolidation and structure of the industry	24
d) Future growth in volume and in value	24
2 - Other issues	27
a) Impact of the regulation	27
b) Nanocarbon	28
IV - Glossary	31
V - Case studies*	32
1 - Design	
A - Streamlining global airframe assembly with integrated composite processes	32
B - Aeronautics is reaching new altitudes with composites	35
2 - Simulation	
Abaqus simulates, analyses composites for Aeronautics	38
3 - Trends	
Aeronautics OEMs seek engineered material innovations	42
4 - Process	
Large-scale composite components made out-of-autoclave	44
5 - Environment	
European framework programme 7: Clean Sky JTI - Eco-Design platform	47
