

AERONAUTICS FORUM

THURSDAY, MARCH 26 2009

10:30 AM – 1:30 PM

AERONAUTICS AND COMPOSITES: THE NEW FUTURE

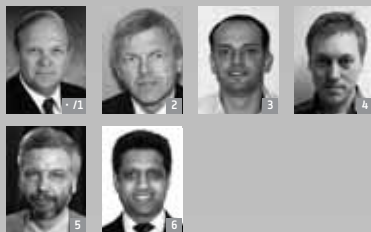

Moderator

● Aerostrategy Limited. David Stewart, Partner.

Over 26 years in aviation. 20 years consulting experience. International aircraft marketing with British Aeronautics.

Significant expertise in the airline, aircraft equipment, and MRO sectors. Experience with 100+ engagements with a global roster of clients. Vice-Chairman of Society of British Aeronautics Companies (SBAC).

MA - Engineering Science from Oxford University UK, MBA - Cranfield School of Management

In partnership with :

TABLE OF CONTENTS

COMPOSITE AERONAUTICS SUPPLY CHAIN: KEY TRENDS

- 1 Outlook for Aeronautics Production and Composite Supply Chain** 3
● Aerostrategy Limited. David Stewart, Head of UK Office and Co-Founder of Aerostrategy Limited
 - Near-term outlook for aircraft production, given recent market turbulence
 - Key trends shaping the composites Aeronautics supply chain
 - Prospects for composites in next-generation airframes
- 2 Premium Aerotec is Born: A New Player in the Ranks of Worldwide Aerostructure Leaders** 17
● Premium Aerotec GmbH. Dr.-Ing. Gerd Berchtold, Vice President Commercial Aerostructures Assembly (Augsburg plant)
 - The restructuring of the European aerostructure suppliers chain
 - Future focus on composite technologies
- 3 The French Aeronautics Supply Chain** 31
● Daher Socata. Philippe Villard, Marketing Director
 - Aeronautics challenges and the role of innovation
 - Impact of the aeronautics network evolution
 - Solutions to get the best cost/performance compromise
 - Daher and its positioning: today Tier 1 and 2012 ambitions

NON-DESTRUCTIVE TESTING

- 4 Load Monitoring of Composite Structures** 43
● Fraunhofer-Institute for Structural Durability and System Reliability (LBF). Martin Lehmann, Dipl.-Ing.
 - Design and manufacturing of a composite wing mock-up of about 4 m length incorporating 42 sensors of different technologies for load monitoring
 - Presentation of the sensor technologies and test results concerning the reliability of sensors
 - Investigation of the effect of sensors on the manufacturing process
- 5 Importance of Non-Destructive Evaluation for Quality Assessment of Composite Components** 61
● CETIM (Centre Technique des Industries Mécaniques). Henri Walaszek, Engineer Research and Development of Advanced Non-Destructive Methods for Mechanical Components.
 - Current state of non-destructive testing techniques, and the evolutions of individual methods, as applied in industry (optical methods, phased-array ultrasonic methods)
 - From manual NDT to automated and robotised NDT
 - The potentiality of non-destructive measurements for monitoring of composite manufacture

DISMANTLING AND RECYCLING

- 6 Converting Composite Waste into High-Quality Reusable Carbon Fibre** 89
● Recycled Carbon Fibre Ltd - Member of the Milled Carbon Group. Sat Panesar, Business Development Manager
 - A recycled carbon fibre in both milled and chopped form, suitable for industrial reuse
 - New ways to dramatically reduce the carbon footprint of our production process
 - A series of characterisations of the recycled fibres
